## DETAILED ACTION

### *Election/Restrictions*

1. Claims 7-36 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention/species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/19/05.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Janosky (EP 1407893) in view of Wu et al. (USPN 5,764,262).

With respect to claims 1-6, Janosky discloses a surface treatment apparatus comprising:

- A sheet heating unit (fig.1, fig.2: element 22) which heats a sheet (14);
- A contact member (fig.2: element 26) for transferring a surface quality thereof to a surface of the image recording layer;
- A sheet cooling unit (fig.2: element 38) which cools the sheet while in contact with the contact member;

- A plurality of contact members (fig.2: element 28, 30, 32, 26) having different surface qualities;
- A contact member selecting unit which selects a contact member having a desired surface quality from the plurality of contact member having a different surface qualities (Column 3: line 41-58);
- The contact member is a member is a member selected from a roller and an endless belt (Fig.2: element 30, 26);
- A surface quality of the contact member is varied so that one of a gloss treatment and a matt treatment is given to the sheet (Column 5: line 3-30);
- A user information providing unit for providing user information containing the contact member surface quality data (Column 4: line 1-3);
- The contact member selecting unit, a desired surface quality if selected based on user information provided by the user information unit (Column 4: line 1-3, Column 6: line 30-37).

However, Janosky fails to teach the sheet having at least a base and a thermoplastic resin layer.

Wu et al. teaches the sheet having at least a base and a thermoplastic resin layer (Column 1: line 64-67, Column 2: line 1-12).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to coating the substrate with a thermoplastic resin layer as taught by Wu. The motivation to doing so is inhibits cracking of the cured coating.
